SUMMARY of Nucleophilic Substitution Rxns:
Nucleophile Product formed when it is reacted with CH2CH2B-
water H2O: -Hydrolysis → CH3CH2OH + HB~
(NaOH) hydroxide (ag): OH - Hydrolynis -> CH3CH2OH + Na Br
ammonia: NH3 CH3CH2NH2 + NH4Br
ayamide ion [:C=N:]+ CH3CH2CN + NaBr
CHICKLIS CHICKLIS CHICKLES TO A PORBY
1° amine R-NH2 CH3CH2N-R + HBx
